Research with ambulance service aims to support callers experiencing loneliness

Experts from Northumbria University have joined forces with professionals from the North East Ambulance Service (NEAS) for a research project that aims to inform new guidance for ambulance trusts supporting people who call frequently. Frequent callers can have a combination of complex mental and physical health issues, and may also be experiencing social issues such as loneliness and isolation.

Researchers from Northumbria's [Department of Social Work, Education and Community Wellbeing](#) are working with Gayle Fidler, Emergency Operations Centre Support Services Manager for [NEAS](#), to interview people who call frequently, frontline paramedics, health advisors and senior clinical advisors from NEAS in a bid to improve routes to the right support and interventions for patients.

[Dr Tracy Collins](#) from Northumbria, who has a clinical background in occupational therapy, is leading the study which has received funding support from the National Institute for Health and Care Research ([NIHR](#)) Clinical Research Network North East and North Cumbria's Targeting Health Needs award.

She is collaborating with [Dr Jason Scott](#), a Chartered Psychologist and national academic lead for the Frequent Caller National Network (FreCaNN), which helps to inform ambulance service policy and practice in relation to frequent callers across the UK, and Senior Research Assistant Lisa Moseley, who comes from a career in social work.

"It became clear from our conversations with colleagues and practitioners that ambulance trusts supporting people who call frequently often have social needs in addition to medical needs," said Dr Collins.

"We're keen to know more about individual experiences and allow those people who do self-identify as being lonely and socially isolated to the ambulance service to have their voices heard. We need to begin to understand their unmet needs so we can begin to make recommendations for alternative routes of support."

Due to the sensitive nature of the topic, only people who self-identify as lonely and socially isolated have been interviewed using open questions which gather information anonymously on their circumstances, social circle and community support networks. Their lived experience is being explored alongside the views of NEAS staff.

Health advisors and paramedic crews dealing with contacts from people who call frequently have been featured in the popular BBC documentary, [Ambulance](#), which followed and filmed with NEAS crews during series 9.

Director of Paramedicine at North East Ambulance Service, Andrew Hodge, said: “Patient care is our priority so it’s important for us to understand the nature of our calls and how we might further support our patients.

“We are currently undergoing this research study with Northumbria University to support patients who experience loneliness and isolation and have felt the need to contact the ambulance service.

“We work closely with other agencies to ensure that patients have access to a range of services that may be able to support them. Working with the university on this project, we hope to understand our patients better so that we can offer greater support to them where needed.”

The project follows a research paper published in the British Paramedic Journal by Dr Scott, Dr Collins and a group of expert authors from UK ambulance services which analysed the impact of the COVID-19 pandemic on people who call frequently and how ambulance services in particular were adapting to suit changing patient needs.

The team are currently analysing data from interviews with service users and staff and hope to be able to publish the research findings later this year.

Plans to harness Northumbria’s research, education and knowledge exchange expertise to help meet the health and social needs of communities in the region and beyond are being developed as part of the University’s Centre for Health and Social Equity (CHASE).

Notes to editors:

[About Northumbria University](#)

Northumbria University is a research-intensive university that unlocks potential for all, changing lives regionally, nationally and internationally. Based in the heart of Newcastle upon Tyne, which is regularly voted the best

place in the UK for students, Northumbria was named UK University of the Year 2022 in the Times Higher Education Awards.

About the North East Ambulance Service

North East Ambulance Service NHS Foundation Trust (NEAS) covers 3,200 square miles across the North East region. It employs more than 3,200 staff and serves a population of 2.7 million people by handling all NHS 111 and 999 calls for the region, operating patient transport and ambulance response services, delivering training for communities and commercial audiences and providing medical support cover at events.

NEAS has 55 ambulance stations, three emergency operations centres, and three training and education centres, and covers 3,230 square miles. It has three emergency operation centres based in Newcastle, Hebburn and Wynyard. It operates around 172 double crewed vehicles and 214 patient transport vehicles as well as 63 emergency response cars, used by specialist paramedics, advanced practitioners and officers, and a fleet of support vehicles including driver training and specialist vehicles for the Hazardous Area Response Team.

In 2022/23, the service answered more than 1.3m emergency 999 and NHS 111 calls, with more than 268,000 patients taken to hospital, more than 37,000 patients treated and discharged over the phone and more than 118,000 patients treated and discharged at home. It responded to more than 20,000 C1 serious and life-threatening incidents in 7 minutes.

About the National Institute for Health and Care Research (NIHR)

The mission of the National Institute for Health and Care Research (NIHR) is to improve the health and wealth of the nation through research. We do this by:

- Funding high quality, timely research that benefits the NHS, public health and social care;
- Investing in world-class expertise, facilities and a skilled delivery workforce to translate discoveries into improved treatments and

services;

- Partnering with patients, service users, carers and communities, improving the relevance, quality and impact of our research;
- Attracting, training and supporting the best researchers to tackle complex health and social care challenges;
- Collaborating with other public funders, charities and industry to help shape a cohesive and globally competitive research system;
- Funding applied global health research and training to meet the needs of the poorest people in low and middle income countries.

NIHR is funded by the Department of Health and Social Care. Its work in low and middle income countries is principally funded through UK Aid from the UK government.
